Atuadores e Cilindros Hidráulicos

Atuadores e Cilindros Hidráulicos

Os atuadores e cilindros Nytron têm qualidade comprovada e são aplicáveis em veículos equipados com sistemas de acionamento hidráulicos de embreagem.

Dentre as vantagens estão:

- Proporciona ao condutor conforto e melhor dirigibilidade.
- Produz maior rapidez no acionamento e desacoplamento da embreagem.
- Reduz vibrações e ruídos em relação aos sistemas convencionais.
- Prolonga a vida útil dos componentes da embreagem.
- Baixa manutenção no sistema de acionamento hidráulico.
- Melhor relação custo – benefício.

Especificações básicas dos produtos

Atuador hidráulico: produto integrado com o rolamento de embreagem com tecnologia mais avançada, que de acordo com o projeto do veículo, pode vir a substituir o cilindro auxiliar. A pressão hidráulica recebida do cilindro mestre produz a movimentação mecânica do rolamento, que aciona o platô e conjunto da embreagem, facilitando o deslocamento e troca de marcha do veículo.

Cilindro mestre: interligado ao pedal de embreagem, quando acionado o cilindro gera alta pressão hidráulica que é deslocada através de tubulações.
